DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

2. The drawings are objected. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

In Figure 4, the box elements need to be labeled with its description.

Figures 9 and 10 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g).

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 3 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 3, lines 15-16, the phrase "the upper electrodes" lacks antecedent basis. In line 20, the phrase "the upper electrodes" lacks antecedent basis.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent 6,029,516 (Mori et al.).

Art Unit: 2856

Mori et al. discloses a vibrating gyroscope capable of self-diagnosis comprising, as illustrated in Figures 1-13, an oscillator 101; a driving portion 14c; a first driving circuit 26; a second driving circuit 42; a detecting portion 14a, 14b; an angular velocity detection circuit 32; a self-diagnosis circuit (column 3, lines 24-42). (See, column 4, line 40 to column 10, line 50).

7. Claims 1-9 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent 6,282,957 (Akimoto et al.).

Akimoto et al. discloses an angular velocity sensor and a diagnosis system comprising, as illustrated in Figures 1-43D, an oscillator 1; a driving portion 11, 12; a first driving circuit and a second driving circuit A1; a detecting portion 13, 14, 17, 18; an angular velocity detection circuit A2; a self-diagnosis circuit A3. (See, column 5, line 7 to column 23, line 65).

With regards to claims 2-9, Akimoto et al. further discloses, as observed in the figures and described in the specification as noted above, the different arrangements and configurations of the electrodes and piezoelectric films as claimed in these claims.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The references cited are related to angular velocity sensor having a self-diagnosis circuit.
